# Purge 450 IPA

## **HERBICIDE**

ACTIVE CONSTITUENT: 450 g/L 2,4-D PRESENT AS THE ISOPROPYLAMINE SALT 50 g/L N-METHYL-2-PYRROLIDONE

GROUP 4 HERBICIDE

For the control of emerged broadleaf weeds prior to sowing crops and pastures in conservation tillage situations and for selective weed control in crops and situations detailed in the Directions for Use.

THIS IS A PHENOXY HERBICIDE THAT CAN CAUSE SEVERE DAMAGE TO SUSCEPTIBLE CROPS SUCH AS COTTON, GRAPES, TOMATOES, OILSEED CROPS AND ORNAMENTALS.

IMPORTANT: Read this booklet before use.

A Approval No: 69060/128224

## AIRR APPARENT PTY LTD

15/16 Princes Street, Newport NSW 2106 P 03 5820 8400 | E enquiries@apparentag.com.au | www.apparentag.com.au

#### GENERAL RESTRAINTS

DO NOT exceed maximum application rate of 10 L/ha (4500 g ae/ha).

DO NOT exceed the maximum daily application rate by backpack spraying of 8.9 L of product per day.

DO NOT apply if heavy rains or storms are forecast within 3 days.

DO NOT irrigate to the point of runoff for at least 3 days after application.

DO NOT apply if crop or weeds are stressed due to dry or excessively moist conditions.

Additional USAGE restrictions apply in some crops, states and seasons, see restriction tables 1, 2, 3, 4 and 5.

## SPRAY DRIFT RESTRAINTS

DO NOT apply by a vertical sprayer.

Specific definitions for terms used in this section of the label can be found at www.apvma.gov.au/spraydrift

DO NOT allow **bystanders** to come into contact with the spray cloud.

DO NOT apply in a manner that may cause an unacceptable impact to native vegetation, agricultural crops.

landscaped gardens and aquaculture production, or cause contamination of plant or livestock commodities, outside the application site from spray drift. The buffer zones in the relevant buffer zone table below provide guidance but may not be sufficient in all situations. Wherever possible, correctly use application equipment designed to reduce spray drift and apply when the wind direction is away from these sensitive areas.

DO NOT apply unless the **wind speed** is between 3 and 20 kilometres per hour at the **application site** during the time of application. DO NOT apply if there are hazardous surface temperature inversion conditions present at the application site during the time of application. Surface temperature inversion conditions exist most evenings one to two hours before sunset and persist until one or two hours after sunrise.

## **BOOM SPRAYERS**

DO NOT apply by a boom sprayer unless the following requirements are met:

- Spray droplets not smaller than a VERY COARSE spray droplet size category
- minimum distances between the application site and downwind sensitive areas (see 'Mandatory buffer zones' section of the following table titled 'Buffer zones for boom sprayers') are observed

Ruffer Zones for Room Sprayers

#### AIRCRAFT

DO NOT apply by aircraft unless the following requirements are met:

- spray droplets not smaller than a Very Coarse spray droplet size category
- for maximum release height above the target canopy of 3 metres or 25 per cent of wingspan or 25 per cent of rotor diameter, whichever is the greatest, minimum distances between the application site and downwind sensitive areas (see 'Mandatory buffer zones' section of the following table titled 'Buffer zones for aircraft') are observed.

•	Grasses except Mossman Burr	,,	

CRITICAL COMMENTS	USAGE RESTRICTIONS
Apply after the first node can be felt at the base of a tiller and before swelling of the head can be felt in a tiller (NSW, ACT, SA only). Apply from tillering to boot stage (Vic only). Apply from mid-tillering to before boot stage (Qld only). Apply at 5 leaf to fully tillered (Tas only).	
Apply from the 5 leaf stage up to jointing stage (Zadoks 15-33). Apply after the 6 leaf stage (Z. 16) for Cranbrook, Jacup, Aroona and Spear Wheat and Mortlock Oats to avoid possible damage. DO NOT spray if Lucerne is present. WEED STAGE: 10-15cm. Docks should be sprayed before 5 leaf stage. Cape Tulip – low rate for Cormils only.	
Apply when crop has 4-5 leaves and most weeds have germinated and are in 2-5 leaf stage. Crop and weeds should be dry at time of application. Some temporary yellowing of crop may occur after application. Undersown sub-clovers may be slightly retarded. DO NOT apply to undersown medics.	
Add 170 mL of surfactant 600 g/L to 100L of spray mixture. Agitate well. DO NOT USE on Q63, Q67, Q80 or Q96 VARIETIES	USAGE RESTRICTIONS APPLY: See TABLE 3: Timing restrictions for spraying SUGARCANE
Apply when crop is 10-20cm high and secondary roots are developing for an over the top spray. When crop is between 20cm high and just before tasselling, spray with droppers into the whorl and on upper leaves.	
Apply when crop is 10-30cm high and secondary roots have developed. Use drop nozzles and direct spray when crop exceeds 30cm in height and before tasselling.	
Apply when the crop is 15-30cm high. Do not spray if the crop is showing signs of stress. Some leaf twisting may occur following application — crop recovers quickly.	
Apply preferably when crop is at 3-6 fully expanded leaf stage but can be sprayed from 2-8 leaf stage. From 6 leaf stage onwards to within 2 weeks of flowering, crop can be sprayed with dropped nozzles to avoid chemical being sprayed into the whorl and on upper leaves.	
Apply when crop has 4-8 fully expanded leaves & secondary roots have developed.	
Spray when secondary roots have developed, when fully tillered & before heads start to form at base on tillers. Do not use on Panorama Millet or Panicum.	
Spray when crop is 10-30 cm high & secondary roots have developed & before tasselling. Apply as direct spray to weeds.  Apply when crop is 12cm high. DO NOT apply between tassel & dough stage. Avoid	
spraying in flower.	USAGE RESTRICTIONS APPLY:
<b>LOWER RATE:</b> Apply as a BAND SPRAY as soon as possible after planting in a 55cm band. <b>HIGHER RATE:</b> Apply as an OVERALL SPRAY after planting and before crop emergence. Some crop damage may occur if heavy rain falls between application & crop emergence.	See TABLE 1: timing restrictions for peanuts.

Pasture legumes including lucerne, clovers and medics may be damaged unless well protected by grasses. Spot spraying is preferred.  For pastures not containing legumes. Only seedling docks, spear thistles and saffron thistle will be controlled  Spray when plants are actively growing preferably before flowering or vining.  Spray when plants are small  Best results are obtained when plants are small. Use high rate on larger plants.  Spray after good emergence of seedlings  Spot spraying. For boneseed only, thoroughly wet plants or seedlings.  MISTING: Lightly wet plants  HIGH VOLUME: Thoroughly wet plants  CUT STUMP: Swab the cut stump within one hour of cutting. Apply by a pouring can or knapsack spray.  AERIAL APPLICATION: Spray when actively growing.  Use a Very Coarse spray with sufficient pressure to penetrate canopy and wet stems as well as foliage. Spray at the end of a wet summer (March to May). Defoliation should occur but respraying of new growth will be necessary in the following Autumn. Broadcast grass seed and keep stock off following Summer to allow the pasture to establish.  Damage may result to pasture legumes.  Hand gun and Knapsack only: a thorough coverage of leaves and plantlets is necessary. Use a non-ionic surfactant (100 %) at the rate of 1.0 mL of surfactant per 1 L of mixture  In all cases apply to young, actively growing weeds ensuring thorough coverage.  1 Spray rosette stage  2 Repeat spraying if necessary  Wet foliage thoroughly  Wet foliage thoroughly	CRITICAL COMMENTS	USAGE RESTRICTIONS

Table 4. Pastures – Spray/ Graze Techniques

Precaution: An increased quantity of poisonous plants may be eaten by stock using spray-graze eg. Caltrop, Capeweed, Paterson's Curse and Variegated Thistle and deaths could result from causes such as nitrate poisoning. With Paterson's Curse, preferably graze stock soon destined for slaughter and avoid extended period of grazing. Avoid grazing with young long trace borses or pins on Paterson's Curse.

CROP	TARGET WEEDS	STATE	RATE (/ha)
Pastures – Spray/ Graze	Docks	Vic only	1.5 L
Techniques	Amsinckia, Thistles, Capeweed, Doublegee,	SA only	730 mL
	Mustard, Paterson's Curse, Wild Turnip, Wild		
	Radish, Docks, Geranium, Erodium		
	Annual Thistles, Capeweed, Doublegee,	Tas, Vic only	730 mL
	Mustards, Paterson's Curse, Turnip, Saffron		
	Thistle, Spear Thistle		
	Amsinckia, Docks (seedling only), Capeweed,	WA only	870 mL
	Doublegee, Mustard, Wild Radish, Wild		
	Turnip, Paterson's Curse, Annual Thistles		
	Spear Thistle, Saffron Thistle		1.7 L
	opear mete, camen mete		2
	Melons	1	2.2 L
	Caltrop, Capeweed, Charlock, Mustards,	NSW, ACT only	400 mL - 1.5 L
	Paterson's Curse, Shepherd's Purse, Saffron,		
	Slender, Spear or Variegated Thistle, Turnip		
	Weed, Wild Radish, Wild Turnip		

## Table 5. Other uses

APPLICATION METHOD	CROP	TARGET WEEDS	STATE
Harvest aid or Salvage spray		Dessicate broadleaf weeds Refer to weed table	Qld, NSW, ACT only
SPOT SPRAYING	High Volume Spraying	Refer to weed table	All States
	Knapsack application		

## Fallow

Situation	Purpose	Application Rate
Preparatory spray for fallow/ clear felled Pinus elliottii	Control of groundsel, unwanted	Up to 6 L/ha with label
plantations prior to replanting pine seedlings	seedlings of previous crop ("wildings") and other susceptible broadleaf weeds listed on the product label	rates of glyphosate as required.

CRITICAL COMMENTS	USAGE RESTRICTIONS
Apply in September only and follow other recommendations above.	USAGE RESTRICTIONS APPLY:
Apply from 6 weeks after opening rains in autumn until the end of August. Seven days	See TABLE 2: Application
after spraying stock paddock at 4-5 times normal rate, preferably with sheep. Maintain	and timing restrictions for
this level of grazing for 6 weeks or until pastures show signs of over grazing. Then	application to pastures
return to normal stocking levels. Use high stoking rates in following spring to prevent	
weeds from flowering. Repeat treatments may be required for 2-3 years for complete	
control	
Apply from 6 weeks after opening rains in autumn until the end of August. Seven days after	
spraying stock paddock at 4-5 times normal rate, preferably with sheep. Maintain this level	
of grazing for 6 weeks or until pasture shows signs of over grazing. Then return to normal	
stocking levels. Use high stocking rates in following spring to prevent weeds from flowering.	
Repeat treatments may be required for 2-3 years for complete control.	
Apply to saffron thistle at the end of September when plants are running up to flower. Sub-	
clovers may be damaged at this rate and use is not recommended for all medic pastures.	
Heavy stocking on young plants sprayed with 750 mL/ha provides effective control.	
Spray actively growing 6-8 week old weeds. Introduce stock 7-10 days after spraying,	
preferably sheep (cattle are less effective). Stocking rate should be at least 5 times heavier	
than normal until weeds have been reduced, but before survival of desirable pasture	
species is threatened. Lucerne and medics may be damaged and should be grazed short	
before spraying. Other legumes may be affected.	

RATE (/ ha)	CRITICAL COMMENTS	USAGE RESTRICTIONS					
1.7 – 2.3L	Apply after dough stage.	No usage restrictions					
	f rate on weed table to 150 L of water. Each 150 L of mix will cover 1000m <sup>2</sup>						
	.g. if rate in weed table is 1.5 L use 150 mL/150 L water.						
Add 1/100th of rate on weed table to 10 L of water. Each 10 L of mix will cover 100m <sup>2</sup>							
(1/100th ha)	e.g. if rate in weed table is 1.5 L use 15 mL/10 L water.						

## **Critical Comments**

Refer to label precautions. Minimum plant-back period of 14 days.

All application is to comply with Forests NSW Manual for the Use of Herbicides. Persons applying pesticides by aircraft in NSW must hold a current NSW pilot (pesticide rating) licence and be employed or engaged by the holder of an aircraft (pesticide applicator) licence.

Hardwood & Softwood Plantations

Crop	Weeds	Application rate
HARDWOOD & SOFTWOOD PLANTATIONS	Broadleaf and woody weeds as per product labels including grounsel and	Maximum rate 2.2 L/ha
	Pinus spp. wildings	

Oil Tea Tree

Crop	Weeds	Application rate
Oil Tea Tree	Weeds on label	Apply at a maximum of 1.5L/ha as per label directions
	Purple Top (Verbena bonariensis)	Apply at 1.5 L/ha plus 720 g ai glyphosate/ha in tank mix.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

## WITHOLDING PERIODS:

PASTURE, CEREAL CROPS: DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 7 DAYS AFTER APPLICATION CROP HARVEST WITHOLDING PERIOD: NOT REQUIRED WHEN USED AS DIRECTED

IN TASMANIA, THIS PRODUCT MAY ONLY BE USED FROM 15 APRIL TO 15 SEPTEMBER UNLESS OTHERWISE PERMITTED BY THE REGISTRAR OF PESTICIDES.

#### WEED TABLE:

The rates listed in the Weed Table below are spot spraying rates for use in crop or pasture, or for use where weeds only are present and no crop or pasture is involved.

**NOTE:** Where weeds are to be sprayed in a CROP or PASTURE (other than spot spraying) use only the rates given for the particular crop or situation indicated under the Directions for Use.

## WEED TABLE:

WEEDS		APPLICA	ITION RATE PER	HECTARE				ı
			CROP				PASTURE	ı
	Vic	NSW	SA	Qld	Tas	WA	NSW, SA, Qld, Tas only	ı
Amaranthus spp.	-	730mL-1.5L	-	1.2L	-	-	-	1

## **Critical Comments**

Apply a single preplant application and/or a maximum of 2 post plant applications using shielded sprayers within the first 2 years following planting. Apply using aircraft (rotary wing only) or ground based equipment. DO NOT spray over or into watercourses. Products may be mixed with glyphosate for pre-plant spray operations,

## **Critical Comments**

Apply as a shielded spray. Avoid contact with foliage, green stems, exposed non-woody roots, desirable plants and trees as severe injury or destruction may result. Apply following harvest as a blanket spray only after:

- All residual tea tree foliage has been removed by mechanical shaving, or by using a burner,
- No swollen buds are present on stumps. <u>NOTE</u> that buds can burst 8 days after harvest in summer and
- Surface of cut stumps are dry before spraying commences.

Apply as a shielded spray. Avoid contact with foliage, green stems, exposed non-woody roots, desirable plants and trees as severe injury or destruction may result.

CRITICAL COMMENTS

Spray young plants, Susceptible when young.

Spray young plants.

Spray seedlings only.

Spray seedlings only
low rate for cormils only
Spray seedlings to rosette stage.

Moderately susceptible.
Spray at rosette stage.

Sunflower®	7	10	14
Triticale ①	1	3	7
Vetch	7	7	10
Wheat ①	1	3	7
White Clover	7	7	10

IMPORTANT: WHEN APPLIED TO DRY SOILS AT LEAST 15 mm (1/2 inch) OF RAIN MUST FALL PRIOR TO THE COMMENCEMENT OF THE PLANT BACK PERIOD.

## NOTES:

- ① In Queensland, no rainfall is required to fall prior to commencement of Plant Back Period for wheat, barley and triticale.
- ② In Queensland, planting of canola/ rapeseed. Chickpeas and safflower must be delayed for at least 14 days following rainfall at least 15 mm.
- ③ In Central Queensland, when using 1.1 L/ha or less of Titan Amine 450 Herbicide, the plant back period for sorghum and sunflower is 1 day irrespective of rainfall.
- In WA the Plant Back Period for Jupins at all rates is 28 days.

#### GENERAL INSTRUCTIONS

Apparent Purge 450 IPA Herbicide is a water soluble liquid product with non selective herbicidal activity against broadleaf weeds, Apparent Purge 450 IPA Herbicide will control emerged weeds only, and provides no residual control although certain plant back periods should be observed. Apparent Purge 450 IPA Herbicide is absorbed by plant foliage and accumulates to toxic levels in the regions of growth and reproduction, upsetting the ability of plants to balance the synthesis and use of nutrients. Visible effects are a gradual yellowing and wilting of the plants which advances to complete browning of above ground growth and deterioration of root systems. Effects may not be apparent for 7 - 10 days or even up to 21 days under cold or cloudy conditions.

**DO NOT** treat weeds under poor growing or dormant conditions such as occur in drought, water-logging, disease, insect damage, following frost, weeds heavily covered with dust or silt. Reduced results may also occur if weeds are under stress from previous herbicide application. Rainfall occurring up to 6 hours after application may reduce effectiveness.

## **DO NOT** spray if strong winds prevail.

#### CROP ESTABLISHMENT

Apparent Purge 450 IPA Herbicide is recommended as a herbicide additive to Glyphosate for control of emerged weeds prior to crop establishment. When Apparent Purge 450 IPA Herbicide is applied prior to crop establishment, certain Plant Back Periods should be observed to ensure that the herbicide has degraded sufficiently to allow safe sowing of the intended crop. This process is largely influenced by moisture, temperature and certain soil characteristics and may be delayed particularly when conditions are cold and dry. Refer to the Plant Back Period table for specific information. In seasons of heavy weed growth, or where the following conditions apply, it may be necessary to further delay sowing until a suitable seedbed can be formed. Conditions which can delay crop germination and seedling development include; Heavy green or decaying weed growth incorporated into the soil; Soil compaction or crusting; Cold and wet soils; Deep seeding; Prior use of residual or pre- emergent herbicides. To minimize these effects it is suggested that; Weed bulk be reduced by grazing and cultivating to

leave trash on the surface to dry out; A friable seedbed be produced by cultivation, where necessary; The use of pre-emergent herbicides to be avoided if they might contribute to reduced germination; A correct seeding depth be used. The preferred alternative is to spray early to control any weeds in their less advanced stages and ensure the seedbed is in a suitable condition for early sowing when soil temperatures are not excessively cold.

#### APPLICATION BOOM EQUIPMENT

Application of Apparent Purge 450 IPA Herbicide/Glyphosate mixtures in spray volumes of 25 - 100 L/ha is recommended. When Apparent Chlorsulfuron 750 WDG Herbicide OR Apparent Metsulfuron 600 WDG Herbicide is included in the mixture a minimum spray volume of 30 L/ha is recommended.

When Simazine is included in the mixture a minimum spray volume of 100 L/ha is recommended. Flat fan nozzle equipment is recommended using pressure in the range 240 - 280 kPa. Boom height must be set to ensure double overlap of nozzle patterns at the top of the weed canopy.

## **AERIAL EQUIPMENT**

Application of Apparent Purge 450 IPA Herbicide/Glyphosate mixtures using either Micronair of boom equipment should occur in a minimum spray volume of 15 L/ha. Apply with spray droplets not smaller than a VERY COARSE spray droplet size category. Swath width should be 15 - 17 metres. Application under hot conditions: High temperature and/or low relative humidity cause excessive evaporation of spray droplets which may reduce results. When temperatures reach 25°C increase water volume to 30 L/ha. DO NOT apply by aircraft when temperature is above 35°C. DO NOT use in intensive horticultural cropping areas. Thoroughly wash aircraft, especially landing gear after each day of spraying to remove herbicide residues.

## **EQUIPMENT MAINTENANCE**

Spray solutions of Apparent Purge 450 IPA Herbicide and Glyphosate should be mixed, stored and applied only in stainless steel, aluminium, brass, copper, fiberglass, plastic-lined containers. Do not mix, store or apply spray solutions in galvanized steel or unlined steel (except stainless steel) containers or spray tanks. Apparent Purge 450 IPA Herbicide/ Glyphosate spray solutions may react with such containers and tanks to produce hydrogen gas which may form a highly combustible gas mixture that can flash or explode if ignited by open flame, spark, welder's torch, lighted cigarette or other ignition source.

Thoroughly clean all equipment after use either by using hot soapy water or 1% solution of ammonia followed by several clean water rinses or use Spraymate Tank & Equipment Cleaner. If using Sulfonylurea herbicides (Apparent Chlorsulfuron 750 WDG Herbicide OR Apparent Metsulfuron 600 WDG Herbicide), follow decontamination procedures detailed on those product labels.

Apparent Purge 450 IPA Herbicide is compatible in tank mixes with Apparent Glyphosate 450 Herbicide and Apparent Glyphosate Green 360 Herbicide, Apparent Dicamba 500, Apparent Chlorsulfuron 750 WDG Herbicide OR Apparent Metsulfuron 600 WDG Herbicide, Simazine Flowable, Simazine DF, Nutrazine Flowable, Sprayseed\*, Apparent Chlorpyrifos 500. Dimethoate. Le Matt 7/Comrad\* and Imidan\*.

## SURFACTANT ADDITION

DO NOT add surfactant excepting in conservation tillage where the product is to be tankmixed with Apparent Glyphosate 450. In this situation always add either a non-ionic surfactant (e.g. Apparent Wetter Gold) or the acidifying surfactant LI-700 in accordance with label directions on the Apparent Glyphosate 450 product. Use LI-700 with Apparent Glyphosate 450 if insecticides will be included in the tank mixture or if faster brownout of weeds is required. DO NOT mix with spraying oils, or any other materials or agricultural chemicals except as directed on this label. DO NOT use LI-700 or Bonus if sulfonylurea herbicides (Apparent Chlorsulfuron 750 WDG herbicide OR Apparent Metsulfuron 600 WDG herbicide) are included in the spray mixture.

#### TANK MIXTURES

The Apparent Purge 450 IPA Herbicide directions for use on this label are designed to be used as a tank mixture with Apparent Glyphosate 450, Apparent Glyphosate Green 360 herbicide. However, as shown in the compatibility and

surfactant addition sections of this label, it is possible to extend/improve weed control to include other foliage applied and/or residual herbicides and adjuvants. A mixture of Apparent Purge 450 IPA Herbicide and Glyphosate may be tank mixed with the following herbicides, insecticides and adjuvants where recommended in the Directions for Use tables. Read and follow all label directions, restraints and plant pack periods, withholding periods and safety directions for the tank mix products.

Apparent Dicamba 500 – for improved control of Sow Thistle. Observe any regional use restrictions. Apparent Chlorsulfuron 750 WDG herbicide – Will provide control for a wide range of broadleaf weeds and grasses. Apparent Metsulfuron 600 WDG herbicide – For improved knockdown control of Yellow Burrweed (Amsinckia), Volunteer Chickpeas, Chickweed, Common Sow thistle, Cut-leaf Mignonette, Deadnettle, Faba beans, Mallee Catchfly, Soursob, Stagger Weed, Wild Garlic. Apparent Metsulfuron 600 WDG herbicide does not provide residual in-crop weed control.

## COMPATIBILITY

## INSECTICIDES

Chlorpyrifos 500EC, Dimethoate, Imidan\* and Le Mat\*/Comrad\* can be introduced into the tank mix for specific control to prevent insect damage to emerging crops.

## MIXING INSTRUCTIONS

Apparent Purge 450 mixes readily with water. Ensure the spray tank is free of any residue of previous spray materials.

- Fill the spray tank with clean water to one half of the required amount and start agitation. DO NOT use mechanical
  agitators as these may cause excessive foaming when herbicides are added.
- Where Apparent Buffer 700 Surfactant acidifying surfactant is recommended at either 100mL or 300mL/100L, add to tank through top mesh screen.
- 3. Add recommended herbicide additive/insecticide to spray tank and mix thoroughly.
- 4. Add Apparent Purge 450 and mix thoroughly.
- 5. Add Apparent Glyphosate 450 herbicide and the remaining water.
- 6. When non-ionic surfactant is used, add near the end of the filling process to minimize foaming.
- 7. Always maintain adequate agitation during application and use the tank mix promptly.

## **RESISTANCE WEEDS WARNING**

## GROUP 4. HERBICIDE

Apparent Purge 450 IPA Herbicide is a member of the Phenoxys group of herbicides. Apparent Purge 450 IPA Herbicide has the Disruptors of plant cell growth mode of action. For weed resistance management Apparent Purge 450 IPA Herbicide is a group 4 herbicide. Some naturally-occurring weed biotypes resistant to Apparent Purge 450 IPA Herbicide and other disruptors of plant cell growth herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by Apparent Purge 450 IPA Herbicide or other disruptors of plant cell growth herbicides.

Since the occurrence of resistant weeds is difficult to detect prior to use Apparent Pty Ltd accepts no liability for any losses that may result from the failure of Apparent Purge 450 IPA Herbicide to control resistant weeds.

**RE-ENTRY PERIOD** DO NOT hand harvest sugar cane for at least 1 day after application. If re-entering treated areas before the spray has dried, workers should wear overalls, elbow-length gloves and water-resistant footwear. Clothing must be laundered after each day's use.

## PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS

DO NOT apply under weather conditions, or from spraying equipment, that may cause spray to drift onto nearby susceptible plants/crops, cropping lands or pastures. Avoid spray drift and vapour movement onto susceptible crops such as cotton, tobacco, tomatoes, vines, lupins, fruit trees and ornamentals.

## PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Very toxic to aquatic life. DO NOT contaminate wetlands or watercourses with this product or used containers.

#### STORAGE AND DISPOSAL

Store in the closed original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight. Triple-rinse containers before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant local, state or territory government regulations. Do not burn empty containers or product.

**Refillable containers:** Empty contents fully into application equipment. Close all valves and return to point of supply for refill or storage.

110 L Returnable Container: Store the original sealed container in a cool well ventilated area. DO NOT store for prolonged periods in direct sunlight. DO NOT tamper with the non-return valve or the security seal. DO NOT contaminate the container with water or any foreign matter. After each use of the product, please ensure that the non-return valve, delivery system and hoses are disconnected, triple rinsed with clean water and drained accordingly. When the contents of the container have been used, please return the empty container to the point of purchase.

#### SAFETY DIRECTIONS

Poisonous if absorbed by skin contact or swallowed. Will damage the eyes. Will irritate the skin. Avoid contact with the eyes and skin. When opening the container and preparing spray or using undiluted concentrate, wear cotton overalls buttoned to the neck and wrist and a washable hat, elbow-length chemical resistant gloves and face shield or goggles. When using the prepared spray, wear cotton overalls buttoned to the neck and wrist and a washable hat and elbow-length chemical resistant gloves. If applying by hand wear half facepiece respirator with organic vapour/gas cartridge or canister. If product on skin, immediately wash area with soap and water. If product in eyes, wash it out immediately with water. After use and before eating, drinking or smoking wash hands, arms and face thoroughly with soap and water. After each day's use, wash gloves, face shield or goggles and contaminated clothing.

#### FIRST AID

Ilf poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26, New Zealand 0800 764 766. If swallowed, do NOT induce vomiting. If in eyes wash out immediately with water.

#### SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet (SDS), which is available from the supplier.

## **CONDITIONS OF SALE**

The use of Apparent Purge 450 IPA Herbicide being beyond the control of the manufacturer no warranty expressed or implied is given by AIRR Apparent Pty Ltd regarding its suitability, fitness or efficiency for any purpose for which it is used by the buyer, whether in accordance with the directions or not and AIRR Apparent Pty Ltd accepts with no responsibility for any consequences whatsoever resulting from the use of this product.
